

LM4050QML Precision Micropower Shunt Voltage Reference

Check for Samples: [LM4050QML](#)

FEATURES

- Low Dose Rate Qualified 100 krad(Si)
- SEFI Immune
- SET Immune with 60µF C_{LOAD}
- C_{LOAD} 0µF to 100µF
- Fixed Reverse Breakdown Voltage of 2.500V, 5.000V

KEY SPECIFICATIONS

- **LM4050-2.5QML**
 - Output Voltage Tolerance IR = 100µA ±0.1% @ 25°C
 - Low Temperature Coefficient 15 ppm/°C
 - Low Output Noise 50 µVrms(typ)
 - Wide Operating Current Range 60 µA to 15 mA
- **LM4050-5.0QML**
 - Output Voltage Tolerance IR = 100µA ±0.1% @ 25°C
 - Low Temperature Coefficient 23 ppm/°C
 - Low Output Noise 100 µVrms(typ)
 - Wide Operating Current Range 74 µA to 15 mA

APPLICATIONS

- Control Systems
- Data Acquisition Systems
- Instrumentation
- Process Control
- Energy Management

DESCRIPTION

The LM4050QML precision voltage reference is available in a 10-Lead Ceramic CLGA package. The LM4050QML's design eliminates the need for an external stabilizing capacitor while ensuring stability with a capacitive load, thus making the LM4050QML easy to use. The LM4050-2.5QML has a 60 µA minimum and 15 mA maximum operating current. The LM4050-5.0QML has a 74 µA minimum and 15 mA maximum operating current.

The LM4050QML utilizes fuse and zener-zap reverse breakdown voltage trim during wafer sort to ensure that the prime parts have an accuracy of better than ±0.1% at 25°C. Bandgap reference temperature drift curvature correction and low dynamic impedance ensure stable reverse breakdown voltage accuracy over a wide range of operating temperatures and currents.

The LM4050QML operates over the temperature range of -55°C to +125°C.

PIN DESCRIPTIONS

Pin Number	Pin Name	Function
1	GND/NC	Ground or No Connect
2	GND/NC	Ground or No Connect
3	GND/NC	Ground or No Connect
4	GND/NC	Ground or No Connect
5	GND	Ground
6	GND/NC	Ground or No Connect
7	GND/NC	Ground or No Connect
8	GND/NC	Ground or No Connect
9	GND/NC	Ground or No Connect
10	VREF	Reference Voltage

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾

Reverse Current		20 mA
Forward Current		10 mA
Power Dissipation ($T_A = 25^\circ\text{C}$) ⁽²⁾	CLGA Package	467 mW
Lead Temperature (Soldering, 10 seconds)	CLGA Package	260°C
Storage Temperature		-65°C to +150°C
Package Weight (typical)	CLGA Package	241mg
ESD Tolerance ⁽³⁾		Class 2 (2000V)

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{Jmax} (maximum junction temperature), θ_{JA} (junction to ambient thermal resistance), and T_A (ambient temperature). The maximum allowable power dissipation at any temperature is $PD_{max} = (T_{Jmax} - T_A)/\theta_{JA}$ or the number given in the Absolute Maximum Ratings, whichever is lower. For the LM4050QML, $T_{Jmax} = 125^\circ\text{C}$, and the typical thermal resistance (θ_{JA}), when board mounted, is 214°C/W for the 10-Lead Ceramic CLGA package.
- (3) The human body model is a 100 pF capacitor discharged through a 1.5 k Ω resistor into each pin.

Operating Ratings⁽¹⁾

Temperature Range		$-55^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$
Reverse Current	LM4050-2.5QML	60 μA to 15 mA
	LM4050-5.0QML	74 μA to 15 mA

APPLICATIONS INFORMATION

The LM4050QML is a precision micro-power curvature-corrected bandgap shunt voltage reference. The LM4050QML is available in the 10-Lead Ceramic CLGA package. The LM4050QML has been designed for stable operation without the need of an external capacitor connected between the “+” pin and the “-” pin. If, however, a bypass capacitor is used, the LM4050QML remains stable. The LM4050-2.5QML has a 60 μ A minimum and 15 mA maximum operating current. The LM4050-5.0QML has a 74 μ A minimum and 15 mA maximum operating current.

The typical thermal hysteresis specification is defined as the change in +25°C voltage measured after thermal cycling. The device is thermal cycled to temperature -55°C and then measured at 25°C. Next the device is thermal cycled to temperature +125°C and again measured at 25°C. The resulting V_{OUT} delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application (Figure 12), an external series resistor (R_S) is connected between the supply voltage and the LM4050QML. R_S determines the current that flows through the load (I_L) and the LM4050QML (I_Q). Since load current and supply voltage may vary, R_S should be small enough to supply at least the maximum ensured I_{RMIN} (spec. table) to the LM4050QML even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and I_L is at its minimum, R_S should be large enough so that the current flowing through the LM4050QML is less than 15 mA.

R_S is determined by the supply voltage, (V_S), the load and operating current, (I_L and I_Q), and the LM4050QML's reverse breakdown voltage, V_R .

$$R_S = \frac{V_S - V_R}{I_L + I_Q} \quad (1)$$

Radiation Environments

Careful consideration should be given to environmental conditions when using a product in a radiation environment.

TOTAL IONIZING DOSE

Radiation hardness assured (RHA) products are those part numbers with a total ionizing dose (TID) level specified in the Ordering Information table on the front page. Testing and qualification of these products is done on a wafer level according to MIL-STD-883, Test Method 1019. Wafer level TID data is available with lot shipments.

Testing and qualification is performed at the 30, 50 and 100 krad TID levels at a dose rate of 10 mrad/s, using a 1.5X overtest at each TID level. For the 30 krad level units are tested to 50 krad, for 50 krad units are tested to 80 krad and for 100 krad units are tested to 150 krad, with all parameters remaining inside the post irradiation test limits.

SINGLE EVENT EFFECTS (SEE)

One time single event effects characterization was performed according to EIA/JEDEC Standard, EIA/JEDEC57. A test report is available upon request.

SINGLE EVENT TRANSIENTS (SET)

With a 60 μ F capacitor on the output, no single event transients were seen at the highest linear energy transfer (LET) tested: 59 MeV-cm²/mg.

SET characterization with other capacitor values is in the SEE report, available upon request.

SINGLE EVENT FUNCTIONAL INTERRUPT (SEFI)

No single event functional interrupts were detected to the highest linear energy transfer (LET) tested: 100 MeV-cm²/mg.

Typical Applications

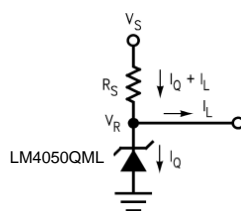

Figure 12. Shunt Regulator

Figure 13. The LM4050QML as a power supply and reference

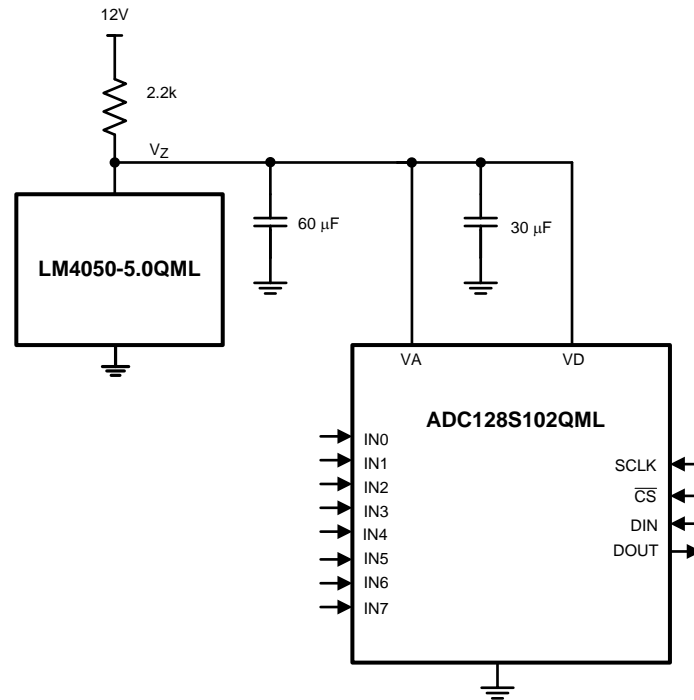

Figure 14. The LM4050QML as a power supply and reference

The LM4050QML is a good choice as a power regulator for the DAC121S101QML or ADC128S102QML. The minimum resistor value in the circuit of [Figure 13](#) or [Figure 14](#) should be chosen such that the maximum current through the LM4050QML does not exceed its 15 mA rating. The conditions for maximum current include the input voltage at its maximum, the LM4050QML voltage at its minimum, the resistor value at its minimum due to tolerance, and the DAC121S101QML or ADC128S102QML draws zero current. The maximum resistor value must allow the LM4050QML to draw more than its minimum current for regulation plus the maximum DAC121S101QML or ADC128S102QML current in full operation. The conditions for minimum current include the input voltage at its minimum, the LM4050QML voltage at its maximum, the resistor value at its maximum due to tolerance, and the DAC121S101QML or ADC128S102QML draws its maximum current. These conditions can be summarized as

$$R(\min) = (V_{IN}(\max) - V_Z(\min)) / (I_A(\min) + I_Z(\max)) \quad (2)$$

and

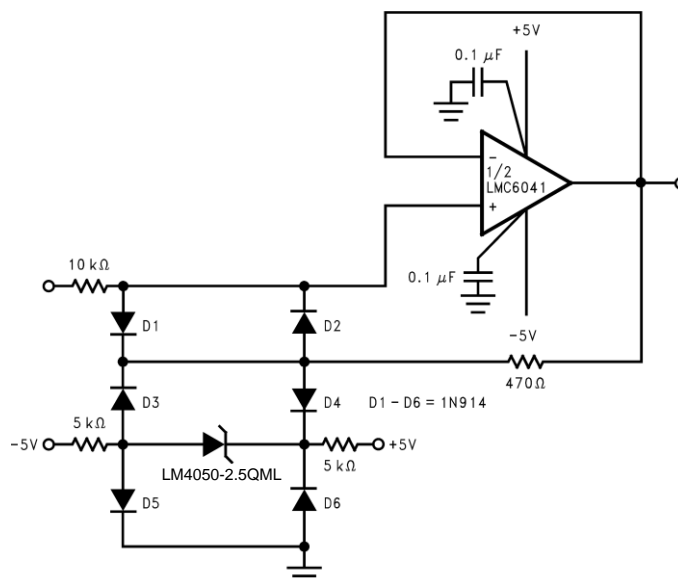

$$R(\max) = (V_{IN}(\min) - V_Z(\max)) / (I_A(\max) + I_Z(\min)) \quad (3)$$

where $V_Z(\min)$ and $V_Z(\max)$ are the nominal LM4050QML output voltages \pm the LM4050QML output tolerance over temperature, $I_Z(\max)$ is the maximum allowable current through the LM4050QML, $I_Z(\min)$ is the minimum current required by the LM4050QML for proper regulation, $I_A(\max)$ is the maximum DAC121S101QML or ADC128S102QML supply current, and $I_A(\min)$ is the minimum DAC121S101QML or ADC128S102QML supply current.

Nominal clamping voltage is $\pm 11.5V$ (LM4050QML's reverse breakdown voltage + 2 diode V_F). Bounded amplifier reduces saturation-induced delays and can prevent succeeding stage damage.

Figure 15. Bounded amplifier

The bounding voltage is $\pm 4V$ with the LM4050-2.5QML (LM4050QML's reverse breakdown voltage + 3 diode V_F).

Figure 17. Precision 1 µA to 1 mA Current Sources

$$*I_{OUT} = \frac{2.5V}{R_2} \quad (4)$$

Engineering Samples (Parts with MPR suffix)

Engineering samples are available for order and are identified by the "MPR" in the orderable device name (see Package Options Addendum at the end of the datasheet). Engineering (MPR) samples meet the performance specifications of the datasheet at room temperature only and have not received the full space production flow or testing. Engineering samples may be QCI rejects that failed tests that would not impact the performance at room temperature, such as radiation or reliability testing.

Revision History

Date Released	Revision	Section	Changes
08/20/2010	A	Initial Release	New Product Low Dose Qualified LM4050WG2.5RLQV Initial Release
01/20/2012	B	General Description, Features, Key Specifications, Ordering Table, Operating Ratings, Package Thermal Table, Electrical Section	General Description, Features, Key Specifications, Ordering Table, Operating Ratings, Package Thermal Table, Electrical Section — Added the 5.0 V option information for all sections. Added new NSIDS LM4050WG5.0RLQV and LM4050WG5.0-MPR Voltage option to data sheet. Revision A will be Archived.
05/23/2012	C	Electrical Section	Electrical Section — Updated Delta Vr/Delta T for typical limits for both the 2.5 and 5.0 versions. Revision B will be Archived.
04/01/2013	F	All	Changed layout of National Data Sheet to TI format.
07/12/2013	G	Post Radiation @ 25°C; Added Engineering Samples	Changed 5V and 2.5V Post Radiation limits so they are the same for both voltages. Added information about orderable engineering samples.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
