SGLS322D-MAY 2006-REVISED NOVEMBER 2008

RESET

NANOPOWER SUPERVISORY CIRCUITS

FEATURES

- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- Supply Current of 220 nA (Typ)
- Precision Supply Voltage Supervision Range:
 1.8 V, 2.5 V, 3 V, 3.3 V
- Power-On Reset Generator With Selectable Delay Time of 10 ms or 200 ms
- Push/Pull RESET Output (TPS3836), RESET Output (TPS3837), or Open-Drain RESET Output (TPS3838)
- Manual Reset
- 5-Pin SOT-23 Package

SUPPORTS DEFENSE, AEROSPACE, AND MEDICAL APPLICATIONS

- Controlled Baseline
- One Assembly/Test Site
- One Fabrication Site
- Available in Military (-55°C/125°C)
 Temperature Range⁽¹⁾
- Extended Product Life Cycle
- Extended Product-Change Notification
- Product Traceability

APPLICATIONS

- Applications Using Automotive Low-Power DSPs, Microcontrollers, or Microprocessors
- Battery-Powered Equipment
- Intelligent Instruments
- Wireless Communication Systems
- Automotive Systems
- (1) Custom temperature ranges available

DESCRIPTION

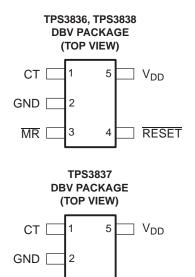

The TPS3836, TPS3837, TPS3838 families of supervisory circuits provide circuit initialization and timing supervision, primarily for digital signal processing (DSP) and processor-based systems.

During power on, $\overline{\text{RESET}}$ is asserted when the supply voltage V_{DD} becomes higher than 1.1 V. Thereafter, the supervisory circuit monitors V_{DD} and keeps $\overline{\text{RESET}}$ output active as long as V_{DD} remains below the threshold voltage (V_{IT}) . An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time starts after V_{DD} has risen above V_{IT} .

When CT is connected to GND, a fixed delay time of typical 10 ms is asserted. When connected to V_{DD} , the delay time is typically 200 ms.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

MR

www.ti.com

When the supply voltage drops below V_{IT} , the output becomes active (low) again.

All the devices of this family have a fixed-sense V_{IT} set by an internal voltage divider.

The TPS3836 has an active-low push-pull $\overline{\text{RESET}}$ output. The TPS3837 has active-high push-pull RESET, and the TPS3838 integrates an active-low open-drain $\overline{\text{RESET}}$ output.

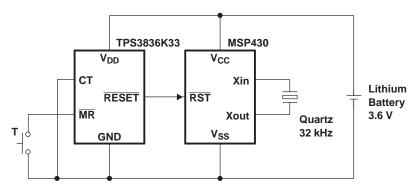

Figure 1. Typical Operating Circuit

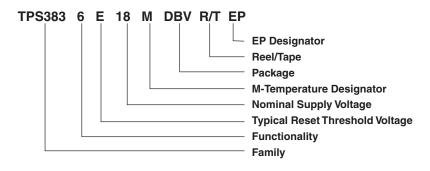

The product spectrum is designed for supply voltages of 1.8 V, 2.5 V, 3 V, and 3.3 V. The circuits are available in a 5-pin SOT-23 package. The TPS3836, TPS3837, and TPS3838 families are characterized for operation over a temperature range of –55°C to 125°C.

ORDERING INFORMATION

T _A	ORDERABLE PART NUMBER ⁽¹⁾	THRESHOLD VOLTAGE	SYMBOL
	TPS3836J25MDBVTEP	2.25 V	PKRM
-55°C to 125°C	TPS3836L30MDBVREP	2.64 V	BTX
	TPS3837K33MDBVREP	2.93 V	PKZM

(1) DBVR indicates reel of 3000 parts, DBVT indicates tape of 250 parts.

Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)

V_{DD}	Supply voltage ⁽²⁾	7 V
	All other pins ⁽²⁾	−0.3 V to 7 V
I_{OL}	Maximum low output current	5 mA
I _{OH}	Maximum high output current	−5 mA
I _{IK}	Input clamp current (V _I < 0 or V _I > V _{DD})	±10 mA
I _{OK}	Output clamp current ($V_O < 0$ or $V_O > V_{DD}$)	±10 mA
T _A	Operating free-air temperature range	–55°C to 125°C
T _{stg}	Storage temperature range	−65°C to 150°C
T_{J}	Maximum junction temperature	150°C
	Soldering temperature	260°C

⁽¹⁾ Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

⁽²⁾ All voltage values are with respect to GND. For reliable operation, the device must not be continuously operated at 7 V for more than t = 1000 h.

⁽¹⁾ The lowest voltage at which \overline{RESET} output becomes active, t_r , $V_{DD} \ge 15 \mu s/V$

⁽²⁾ To ensure best stability of the threshold voltage, a bypass capacitor (ceramic, 0.1 μF) should be placed near the supply terminal.

⁽³⁾ If manual reset is unused, MR should be connected to V_{DD} to minimize current consumption.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

PACKAGE OPTION ADDENDUM

10-Dec-2020

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
